I am a highly motivated, solution-oriented individual who has enthusiastically embarked on a career transition into software development. Over the past six months, I have devoted more than 50 hours per week to honing my coding skills and immersing myself in the world of web development. As a result, I have emerged with a comprehensive understanding of web development concepts and practices. I am eagerly anticipating the opportunity to apply my skills in real-world scenarios and am committed to a lifelong journey of learning and growth within the industry.

PROJECTS

[My Portfolio Website](#) - Built with ReactJS and extensive CSS styling; mobile friendly.

[AI Map Concierge](#) - A React web app that integrates a Chat GPT API on a Google Map to help you learn about wherever you click, integrates buttons, autocomplete, geocoding, iMessage recreation, and Firebase authentication.

[IMDb Clone](#) - A recreation of the IMDb home page using React, CSS, and various npm packages.

[Burning Oil](#) - A 2D platforming game developed with C# and Unity. Animations and character collisions by me.
